

Suggested client-facing summary

The newest YSS AI course release gives licensed users a smoother course experience, a broader set of AI Assist tools, richer applied outputs, secure module launching, stronger admin visibility, and more flexible input methods including document attachments and voice dictation in supported browsers.

Recommended rollout note

Clients who have already used Version 2 should be told that the latest release is not just a cosmetic refresh. It expands what the platform can help users produce, strengthens the way access is managed, and makes the course easier to support at scale.

- For learners: emphasize easier access to AI Assists, more Module 6 output options, document attachments, exports, and dictation.
- For sales leaders: emphasize better adoption support, clearer workflows, and more practical ways to turn the sales story into outreach assets.
- For administrators: emphasize licensing, seat management, activation recovery, session controls, and usage visibility.

YSS AI Online Course v2.1.0: a broader, safer, more usable AI-enabled course platform.
